

SIDE
SIZE DETECTION

Automatic **garment** size detection system.

SIZE DETECTION

SIDE

Automatic garment **size detection** system.

SIDE is a technologically advanced solution for the automatic detection of body measurements, designed to simplify and automate the process of selecting garment sizes. The measurement is carried out in a self-service, contactless mode, fully respecting user privacy and eliminating the need for specialized personnel.

By using a **3D camera** and sophisticated artificial intelligence algorithms, SIDE performs an accurate body scan, automatically detects measurements, and determines the correct clothing size. It is a particularly effective tool for determining the right sizes without the need for trying on garments, making it ideal both for clothing retail chains and organizations managing mass distribution of uniforms to staff.

SPECIFIC ADVANTAGES OF THE SOLUTION

Automated size selection process, eliminating both the need for physically trying on garments and direct contact during the body measurement phase.

Significant reduction in measurement acquisition times, resulting in faster operational flows.

Cost optimization, SIDE eliminates the need for specialized personnel to perform measurements.

Simple, guided user experience, enabled by a clear and intuitive touchscreen interface.

Improved efficiency in uniform management, with accurate, digitally storable measurement data.

SYSTEM FEATURES

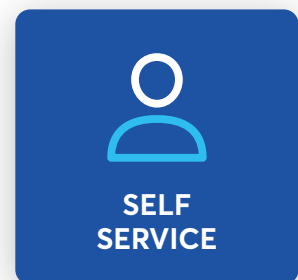

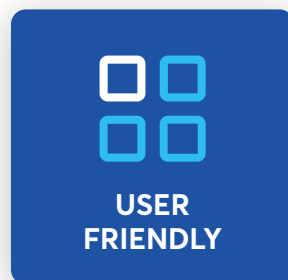

The SIDE system is integrated into a dedicated measurement booth, where users can perform measurements independently and safely. The process is supported by a touchscreen monitor that guides users step-by-step, making the experience accessible even to those with little technological literacy.

At the end of the process, a result is generated and can be printed or digitally sent to a storage system, with the user's prior authorization. The technology used ensures high standards of accuracy, safety, and data protection, perfectly meeting the needs of business process digitization and automation.

SIDE.
Autonomous, secure and digital sensing.

A guided and intuitive experience where technology and simplicity meet to turn sensing into a fast, accurate and totally secure process. Digitization that simplifies your processes.
